

**NEW!**

# Faster, Cleaner, More Effective Flething Operations

A dramatic new advancement in mobile flething technology

# Clean, Fast, Effective Mobile Fleshing in Taxidermy Applications

*Mastering the taxidermist's art takes skill and practice. Even the most skilled taxidermists face challenges – such as when a customer brings in a 'project' that is poorly skinned – that require an extensive degree of physical labor to properly prepare the hide or skin for tanning.*

In addition, hides with a high degree of fat cover are heavy and awkward to flesh. Using conventional fleshing machines and a draw knife requires a vigorous workout to scrape away congealed fat and membranes.

Moreover, fleshing machines are imprecise; bringing a large fatty hide to a stationary whirling blade will not always deliver consistent-quality results. Also, there's always the risk that the blade will cut too deeply into the skin, loosening the hair follicles and causing the fur to pull out.

*The Whizard® Trimmer gives you power – and precision – right in the palm of your hand.*

Up until now, these challenges had no easy solution. But now that's all changed! The new Whizard® Series II Trimmer from Bettcher Industries can solve these and many other fleshing challenges. Available in electric or pneumatic models and containing special design features so unique they're patented, the Whizard® Trimmer represents the first major technological advancement in the taxidermist's trade in years – truly a breakthrough in improving the ease and precision of fleshing operations.

## **Cuts tough jobs down to size.**

With the mobile Whizard® Trimmer, you bring the fleshing tool to the hide for improved speed, mobility and control, with just a fraction of the physical effort of traditional processes. By introducing additional speed and efficiency into your operation, you can now take on more projects – including what used to be those dreaded “make good” projects – for more productivity and more profits.

## **How the Whizard® Trimmer works.**

The fast-rotating, circular blade of the Whizard® Trimmer cuts through heavy fat and membrane quickly and precisely. As long as the hide is pulled tight, the blade will glide almost effortlessly across the skin, while the fur on the back side provides elasticity from the cutting edge of the blade. Even though fat tends to congeal and make the work difficult in conventional fleshing operations, the Whizard® Trimmer has the power and mobility to cut through the fat quickly and precisely.

### **An absolute labor saver.**

Consider all of the ways the Whizard® Trimmer saves labor while enhancing productivity of the fleshing operation:

- Rapid removal of fat cover – quickly fleshes out a hide.
- A highly maneuverable tool, it can go around edges and into small detail areas up to the edge-face zone on most types of skins.
- Reduces the amount of hand-detail required.
- Simple and easy to operate, with less fatigue and stress on the operator.

### **Other operating advantages.**

The advantages of using the Whizard® Trimmer in the fleshing operation go well beyond labor-savings, including:

- Easy to use – bringing the trimmer to the hide, not the hide to the flesher, takes most of the physical effort out of the fleshing process.
- The cutting operation can be performed on a flat surface, making cuts easier and cleaner.
- Greater control and accuracy – lightweight and maneuverable, the Whizard® Trimmer works well, even in detail areas.
- The Whizard® Trimmer de-skills the job, so even new operators can become proficient quickly.
- With the Whizard® Trimmer, you now have the ability to process more skins in less time.
- Even difficult hides like bear skins can be tamed with the productive power of the Whizard® Trimmer.

*The Whizard® Trimmer gives you exceptional control – even in detail areas.*

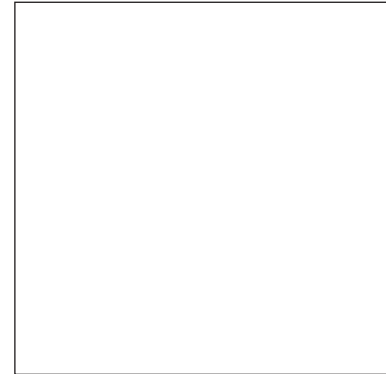

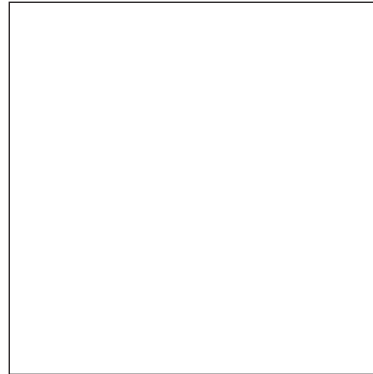

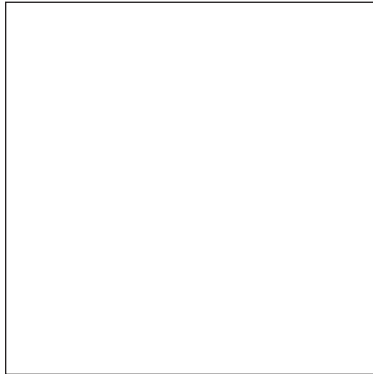

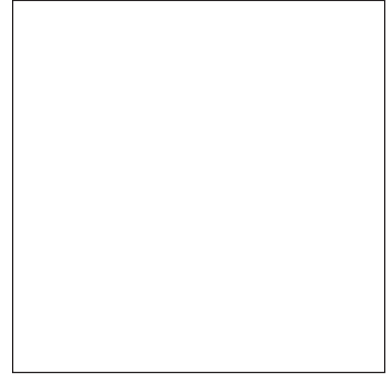

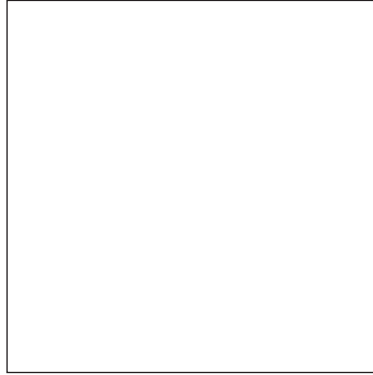

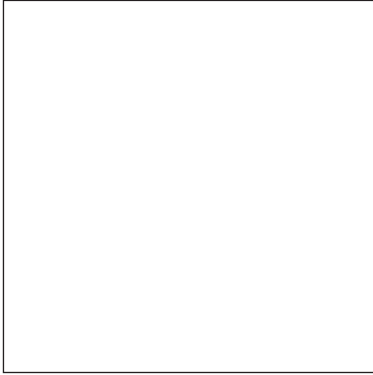

### **It pays. We'll prove it.**

When you consider all the advantages the Whizard® Trimmer offers, it adds up to one result: it's an investment that will pay for itself many times over. And our product specialists will show you how.

*The Whizard® Trimmer cuts through heavy fat cover quickly and cleanly.*

## Typical Applications

## Brought to you by the leader in trimming technology.

The powerful productive performance of Whizard® Series II Trimmers comes from the U.S. leader in cutting and trimming technology across a wide variety of industry segments. Bettcher Industries has 60 years of successful innovation and manufacturing experience in the meat processing industry worldwide. We are committed to designing user-friendly equipment that enhances produc-

tivity and lowers operating costs, while maximizing worker safety and comfort.

Our constant search for new ways to trim meat more efficiently and enhance work processes has led us to offer breakthrough solutions in a wide variety of application segments. We look forward to working with you to develop new valued-added applications in the taxidermy field.
