

## Repair Tip - Air Shirz<sup>®</sup> Pivot Pin

### Pivot Pin Repair Kit

For rare events when the mounting boss that holds the air cylinder pivot is broken, a new repair kit #108803 has been created.

Previously, when the boss broke, there was no way to retain the pivot dowel, and the entire frame had to be replaced.

This new kit makes it easy to fix this unusual occurrence. Included in the kit are a heavy-duty threaded pin plus instructions.

To install, with the old pin and set screw removed, simply insert the threaded pin through the boss and air cylinder piston and tighten. Thread the new pin to secure the holding pin.

This repair works for all AirShirz<sup>®</sup> models—*Lite, Classic and Magnum*.
