

Portable Trimmer

What is it?

- An *untethered Whizard trimmer* provides both installation and application flexibility across the meat processing industry.
- This portable solution allows a wide range of movement to the operator, providing much of what is accomplished today with (costly) pneumatic power.
- Trimmer equipment would be “ready to deploy” and protected from daily washdown as no permanent installation on the production line is necessary.

Where does it fit?

- Pneumatic users and/or applications.
- Day-to-day rework or temporary trimming stations.
- Smaller processors requiring flexibility.
- Lighter duty applications.

Why is it valuable?

- Lower TCO from electric tools vs. pneumatic.
- Reduced utility cost vs. pneumatics.
- Flexible installation requirements.
- Opportunity for smaller customers with multiple applications from single power source.
- Reduced wear and tear from daily washdown.
