

Performance with a punch!

Quantum Skinner®

Bettcher Industries introduces the all-new Quantum Skinner®, an innovative electrically powered tool that delivers **substantial energy savings**, requires less maintenance and improves performance.

In addition to offering dramatic energy savings, the Quantum Skinner delivers more power and a quieter operation thanks to the high-speed Quantum Motor™ and driveline.

Dramatic Savings

Pneumatic tools are expensive to operate and costly to maintain. Most air-powered motors have vanes, gear boxes and bearings, too – components that require constant attention. When you consider everything, it's no surprise that the electrically powered Quantum Skinner® will save you big dollars by comparison.

Faster, Easier, Quieter Operation

The Quantum Skinner is engineered to remove skin and fat at a controlled depth, eliminating knife gouges while removing hog hair roots and skin patches easily and effectively.

The skinner connects to the high-speed Quantum Motor™ and driveline, thereby delivering more power and a quieter operation. Our skinner is lighter and easier to handle than competing models, too.

Increase Your Productivity

The Quantum Skinner is a labor-saving tool that improves productivity along with increasing product yields. One tool and one operator are capable of keeping up with today's rapid production requirements.

See It in Action

Visit bettcher.com/QS to see video clips of the Quantum Skinner in action. Or call **+41 41 348 02 20** to talk with our yield specialists and learn more about how this new tool will please your processing line workers even as it reduces your operating costs.

Energy Savings that Really Add Up

If you're wondering how much you could save by switching to electrically powered skinners, we're here to help.

We'll conduct a comparative energy usage analysis based on your own specific operating conditions and show you the results.

Contact our yield specialists at **+41 41 348 02 20** for assistance.

Quantum Skinner® delivers ...

- Consistent cutting power
- Quiet operation
- Reduced weight
- Less maintenance

Powerful performance – yet so easy to use!
