

Off-set Split Housing Design

Keeping debris out of Series II Trimmer Pinions

Back in 2006, the off-set split blade housing was introduced for the 500M2 and 620M2 Trimmers to prevent debris from getting pulled into the pinion area. In the three years since its release, the off-set split housing has proven to be a significant innovation that now has a patent pending. Because of these positive results, additional models will convert to this design as inventories are exhausted. The models with the off-set split housing are shown below:

Off-Set Split Housing	Part Number
500 / 505M2	# 183575
620 / 625M2	# 185606
1000 ~ 1500M2	# 183143
