

Sharpen and Steel with the E-Z Edge Personal Sharpener

*Always a perfect edge for
all Whizard[®] Trimmers.*

**Better productivity. Better product appearance.
Better for the bottom line.**

The Cost of a Dull Blade.

Increased operator effort and diminished product appearance.

Many applications, such as bone trimming, can quickly dull a blade. Some demanding applications may require blade changes during the shift. Operator training to properly sharpen a blade is time consuming. Problems associated with dull blades are:

- Lower productivity and yields
- Increased stress on the wrist and forearm
- Reduced product appearance
- More frequent blade changes
- Lost time sharpening and replacing blades

Now anyone can sharpen Whizard® Trimmer blades perfectly every time with minimal training.

Quick • Precise • Consistent • Simple

The Whizard Trimmer blade/housing assembly is automatically held in proper position with the new E-Z Edge Sharpening System. It precisely sharpens the blade while the trimmer is running, plus it steels the blade edge accurately and consistently for improved blade life.

Available as both portable or fixed models (as shown). The E-Z Edge Sharpener brings fast and effective blade sharpening to where it is needed most!

Improve Worker Productivity and Safety

Take the guess work out of sharpening

The Bettcher E-Z Edge Sharpening System is a breakthrough in Whizard edge management that makes sharpening blades easier and more precise than by hand sharpening alone.

- ▶ **Increase Productivity** - Sharp blades cut with reduced effort
- ▶ **Better Product Appearance** - Sharp blades cut more precisely for improved product appearance and yield.
- ▶ **Accurate Sharpening** - The cubic boron nitride rod quickly restores a sharp edge
- ▶ **Exact Steeling** - Precisely steels the inside and outside blade edge to improve blade performance by restoring rolled edges. No more guesswork.
- ▶ **Longer Edge Life** - Correctly sharpened blades maintain an edge longer
- ▶ **Improve Blade Life** - The E-Z Edge increases blade life by restoring rolled edges by always sharpening at the right angle

Easy to Train, Easy to Use

Straight Blades

Top View

Bottom View

- Step 1:** With the trimmer running, place the E-Z Edge locator over the blade house.
- Step 2:** While holding the E-Z Edge firmly down on the blade housing, slide the sharpening rod against the blade for a few seconds, with very light pressure.
- Step 3:** Slide blade against the steeling rod for a few seconds, with very light pressure and you're done!

Flat Blades

Top View

Close-Up

- Step 1:** With the trimmer running, place the trimmer inside the locator. Make sure the blade is centered between the two rods.
- Step 2:** Rest the blade flat on the two rods with a very light pressure.
- Step 3:** Slide blade against the steeling rod for a few seconds, with very light pressure and you're done!

Invest in Edge Management

Model 210 - Blade Sharpener

The choice of many medium to high volume operations the world over.

- **Cost Effective** - Sharpens and steels virtually all Whizard blades in a compact, low-cost package.
- **Factory Edge** - restores dull blades to their original factory edge.

AutoEdge™ Precision Blade Sharpener

Designed for high volume operations that need to precisely sharpen a large number or wide variety of blades.

- **Automatic Sharpening** - Simply load a blade and press one button; this allows the operator to multitask.
- **Consistent Perfection** - Computer controlled sharpening and steeling process delivers maximum blade sharpening.
- **Increased Blade Life** - Precision sharpened blades require fewer grindings. Computer controlled for optimum blade life.
